

1. FOOD PROCESSING UNIT

New packaged-food processing unit in Pune, Maharashtra

Investment: ₹5 crore

80 employees

Industrial premises

Manufacturing/processing food products

A. Business / basic registrations

1. Company / LLP / Partnership registration

Purpose: Establish the legal entity.

Depending on business structure:

- Certificate of Incorporation
- MOA
- AOA
- PAN
- TAN
- Registered office proof
- Director/partner details
- Identity/address proof of promoters/directors/partners
- Authorization/resolution, where applicable

2. Udyam/MSME Registration — if eligible

Udyam registration uses Aadhaar/PAN-based verification, with enterprise information and GST-related information where applicable.

Typical information/documents:

- Aadhaar
- PAN
- GSTIN, where applicable
- Enterprise name
- Organisation type
- Business address
- Bank details
- Plant/unit details
- Investment/turnover information

Important: Udyam is not necessarily a prerequisite for every approval.

3. GST Registration — if applicable

Typical information/documents:

- PAN
- Aadhaar/identity details of authorised signatory
- Photograph
- Business constitution proof
- Certificate of incorporation/partnership deed, etc.
- Principal place of business proof
- Rent/lease agreement or ownership document
- Electricity/property-tax/municipal proof as applicable
- Bank account details
- Authorisation letter/board resolution where applicable

B. Food-specific approvals

4. FSSAI License

This is **one of your most important food-processing approvals**.

A food manufacturing/processing business needs the appropriate FSSAI registration/license based on its activity and eligibility. FoSCoS specifically identifies manufacturing/processing units and has separate document requirements.

Core documents

- Application Form
- Factory Layout
- Machinery List
- Product List
- Premises Proof
- Company Documents
- Water Test Report
- FSMS Plan
- Responsible Person Authorization
- Local Body NOC

Additional documents can apply depending on the product—for example milk procurement information, meat raw-material source, packaged-water reports, etc.

C. Environmental approvals

5. MPCB Consent to Establish — CTE

For an industrial unit, environmental consent may be required depending on the activity/category.

MPCB's published checklist for **Consent to Establish** includes:

Documents

- Land Ownership
- Industry Registration
- Manufacturing Process
- Capital Investment Certificate
- Pollution Control Proposal
- Local Authority NOC

6. MPCB Consent to Operate — CTO

This is generally a later-stage approval.

MPCB lists:

- CA certificate
- Balance sheet/capital investment
- Manufacturing process
- Industry registration
- Land ownership certificate
- Pollution-control proposal
- Previous Consent copy

D. Building / fire / factory

7. Building / Planning Permission

Exact authority depends on location—municipal corporation, council, MIDC, special planning authority, etc.

Typical document package:

- Land ownership/lease document
- Site plan
- Building plan
- Architectural drawings
- Floor plans
- Elevation/section drawings
- Development proposal
- Project details
- Structural information
- Architect/engineer certification
- Applicable NOCs

8. Fire Provisional NOC

Maharashtra Fire & Emergency Services publishes a specific document list.

Documents include

- Application from company/individual/society
- Authorisation letter, where architect/civil engineer applies
- Detailed site address
- Applicable development-control rules
- Architectural drawings:
 - Block plan
 - Floor plans
 - Section
 - Elevation
- Floor-wise area calculations
- Activity/process description
- Industrial process-flow chart
- Fire-prevention/protection details
- Block plan showing:
 - Main road
 - Entrances
 - Adjacent plots
 - Approach roads
 - Basement
 - Transformer yard
 - Utility block
 - Raw-material storage
 - Finished-goods storage
 - Hazardous storage
- Raw-material list
- Finished-goods list
- Storage quantities
- Fire protection system details
- HVAC/ventilation/fire-damper information
- Relevant approvals from agencies where applicable
- Company registration/license
- Architect/civil engineer certification
- Applicable fee receipt

The Fire Department also distinguishes provisional and final NOCs.

9. Factory Plan Approval / Factory Licence

Because this is a manufacturing/processing factory, factory-related registration/licensing can become applicable depending on the statutory definition and worker/power thresholds.

Typical information/document package can include:

- Factory plan
- Site/layout plan
- Building drawings
- Machinery layout
- Manufacturing process
- Raw-material details
- Finished-product details
- Machinery details
- Power details
- Worker details
- Safety arrangements
- Stability/structural certificate as applicable
- Occupancy/completion documentation as applicable
- Fire-related approval
- Pollution-related approval
- Entity/land documents

The Maharashtra Labour Department maintains separate Factory Registration/Licence workflows and inspection requirements

10. Electricity connection

For an industrial connection, typical documents/information include:

- Identity proof
- Entity registration
- Ownership/lease document
- Site address
- Load requirement
- Electrical installation details
- Wiring/electrical contractor documents
- Test certificate
- Approved building/occupancy documents where required
- Authorisation documents
- Applicable NOCs

Exact requirements depend on the utility, voltage/load and project stage.

11. Shops & Establishments — where applicable

For offices/establishments, Maharashtra's Labour Management System lists documents such as:

Identity proof — any applicable one

- PAN
- Passport

- Aadhaar
- Driving licence
- Election card

Address proof

- Rent receipt
- Telephone bill
- Electricity bill
- Sale/purchase deed
- Property-tax receipt
- Notarised leave & licence
- Society maintenance receipt

Other

- Other mandatory licence/registration under applicable law
- Self-declaration Annexure A
- Self-declaration Annexure B
- Photograph of establishment showing signboard
- Incorporation/ROC/MOA documents
- Partnership deed, where applicable

The exact applicability differs between an industrial factory and an office/establishment.

2. IT / ITES UNIT

Now this is **very different**.

An ordinary IT/ITES office is much simpler than a food factory.

Let's assume:

IT/ITES company in Pune

₹10 crore investment

150 employees

Office/business premises

No manufacturing

No hazardous industrial process

A. Basic registrations

1. Company/LLP/Partnership registration

Documents:

- Incorporation application
- MOA/AOA, where applicable
- Director/partner details
- Identity proof
- Address proof
- Registered office proof
- PAN
- TAN
- Authorisation/resolution

2. GST Registration

Typical documents:

- PAN
- Aadhaar/identity details
- Photograph
- Incorporation/constitution proof
- Business address proof
- Rent/lease/ownership document
- Electricity/property document as applicable
- Bank details
- Authorisation/board resolution

3. Udyam

If eligible:

- Aadhaar
- PAN
- GSTIN where applicable
- Enterprise details
- Organisation type
- Address
- Investment/turnover information

Udyam's official process is largely Aadhaar/PAN/data-verification based.

B. Shops & Establishments

This is particularly relevant to an IT office.

Documents

- Employer/entity identity proof
- Establishment address proof
- Rent/lease/ownership proof
- Electricity/property proof
- Incorporation certificate
- MOA/AOA or partnership deed as applicable
- Director/partner details
- Self declarations
- Photograph of establishment/signboard

Maharashtra's Labour Management System publishes these document categories.

C. Fire approval

If the office/building requires fire approval:

Documents

- Application
- Authorisation letter
- Building/site drawings
- Floor plans
- Section/elevation
- Area calculations
- Fire safety arrangements
- Building activity details
- Existing approved drawings
- Occupancy certificate where applicable
- Company registration documents
- Architect/civil engineer certification

Maharashtra Fire & Emergency Services provides the detailed fire document requirements.

D. Building / Occupancy

If constructing or modifying premises:

Typical documents:

- Land/lease document
- Building plans
- Architectural drawings
- Structural documents
- Site plan
- Development permission
- Architect certificate
- Applicable NOCs
- Completion certificate
- Occupancy certificate

E. IT/ITES-specific MAITRI/industry registration

Typical documents:

- Company incorporation documents
- PAN
- GST
- Location/premises details
- Investment details
- Employment details
- Activity/business description
- Ownership/lease document
- Authorisation/resolution
- Supporting project documents

F. EPFO / ESIC

Depending on applicability based on employee coverage and law:

Typical information

- PAN
- Entity incorporation proof
- Address proof
- Employer/director details
- Employee information
- Bank details
- Digital/signatory information

3. MANUFACTURING UNIT

Now let's make this one:

Engineering/manufacturing plant in Nagpur

₹20 crore investment

250 employees

Industrial plot

Machinery + manufacturing process

This is your **best scenario for demonstrating complex dependencies.**

A. Basic registrations

Same foundation:

1. Company/LLP/Partnership

Documents:

- Incorporation/registration certificate
- MOA/AOA or partnership deed
- PAN
- TAN
- Director/partner details
- Identity/address proofs
- Registered office proof
- Authorisation/resolution

2. GST

Typical:

- PAN
- Aadhaar
- Entity constitution documents
- Business address proof
- Lease/ownership proof
- Electricity/property document
- Bank details
- Authorisation

3. Udyam — if eligible

- Aadhaar
- PAN
- GSTIN where applicable
- Enterprise information

- Investment
- Turnover
- Unit/location details

B. Land / development

4. Land / Industrial Plot Documentation

Typical:

- MIDC allotment/lease document, if applicable
- Sale deed/ownership document
- 7/12 extract/property record, where applicable
- Mutation/property records
- Site plan
- Possession document
- Land-use information
- Applicable NOC

The exact documents depend heavily on whether the land is **MIDC land, private industrial land, converted agricultural land, etc.**

C. Building approval

Documents

- Land/lease document
- Site plan
- Building plan
- Floor plans
- Elevation
- Section
- Structural drawings
- Architect certificate
- Project details
- Machinery layout, where applicable
- Fire-related documents
- Applicable NOCs
- Development permission

D. Factory

5. Factory Plan Approval

Typical:

- Factory layout

- Site plan
- Building drawings
- Machinery layout
- Manufacturing process
- Raw-material details
- Finished-product details
- Worker details
- Power/machinery details
- Safety provisions
- Structural/stability information
- Applicable NOCs

6. Factory Licence

After the required statutory stage/approval and construction/setup:

Typical supporting documents can include:

- Approved factory plan
- Factory registration/application details
- Entity documents
- Land/building documents
- Machinery details
- Worker details
- Manufacturing process
- Stability certificate where applicable
- Fire approval
- Pollution-related approval
- Safety arrangements

The Maharashtra Labour Department's factory framework includes factory licensing and inspections.

E. Pollution

7. MPCB Consent to Establish

Core documents:

- CA certificate
- Capital investment
- Manufacturing process
- Industry registration
- Land ownership
- Pollution-control proposal
- Planning-authority NOC where applicable

8. MPCB Consent to Operate

Core:

- CA certificate/capital investment
- Manufacturing process
- Industry registration
- Land ownership
- Pollution-control proposal
- Previous Consent to Establish

F. Fire

9. Fire Provisional NOC

Documents include:

- Application
- Authorisation
- Architectural drawings
- Block plan
- Floor plans
- Section/elevation
- Area calculations
- Process-flow chart
- Fire protection details
- Raw materials
- Finished goods
- Storage quantities
- Hazardous-material details
- Transformer/utility/storage information
- Relevant departmental approvals
- Company registration
- Architect certification
- Fee receipt

G. Electricity

10. Industrial Electricity

Typical:

- Identity/entity documents
- Land/lease proof

- Building approval
- Electrical load details
- Electrical drawings
- Installation/test certificate
- Authorised electrical contractor documents
- Applicable safety approvals
- Payment/security documents

H. Boiler / pressure equipment

11. Boiler Registration

Only if your manufacturing unit has a boiler/steam boiler.

Potential documents:

- Boiler details
- Manufacturer certificate
- Design documents
- Inspection certificate
- Test certificate
- Installation details
- Owner/entity details
- Previous inspection documents, where applicable

Don't make this mandatory for every manufacturing company.

I. Hazardous materials

If the plant stores/uses:

- Petroleum products
- LPG
- Certain chemicals
- Hazardous gases
- Solvents

then additional approvals can arise.

Fire Department documentation itself asks for copies of relevant approvals where materials require permission from agencies such as explosives/petroleum authorities, MPCB, etc.

(Does your project handle hazardous materials?

YES → activate additional approvals

NO → hide them)

FOOD PROCESSING — Parallel Flow

[[Company Registration, GST/Udyam, Land/Lease],
[Project Details], [Building permission ->Fire Provisional NOC, MPCB CTE, FSSAI],
[Construction],
[Electricity, factory license, fire final NOC],
[MPCB CTO],
[OPERATIONS]]

First understand the problem in simple words

Imagine I want to start a **food-processing factory in Pune, Maharashtra**.

I may need things such as:

- Company/business registration
- Land-related permissions
- Building approval
- Pollution-related consent
- Factory licence
- Fire NOC
- Electricity connection
- Labour-related registrations
- Water-related permission
- Environmental permissions
- Various inspections
- Renewals
- Government incentives/subsidies

The problem is:

How does the entrepreneur know exactly which approvals apply to HIS particular business?

Because requirements can depend on:

- Industry type
- Location
- Investment size
- Land area
- Number of employees
- Pollution category
- Project stage
- Type of machinery
- Production capacity
- Whether the business is new/expanding
- etc.

The PS wants you to make this process **intelligent and automated**.

What exactly are they asking you to build?

Think of your project as:

AI-powered Industrial Approval & Compliance Assistant

A user enters information about their proposed business.

For example:

Industry: Food Processing

Location: Pune
Investment: ₹5 Crore
Employees: 80
Land: 2 acres
New/Existing: New
Production: Packaged Food

Your system then generates:

YOUR REQUIRED APPROVALS

1. Factory Licence
Department: Directorate of Industrial Safety
Status: Required
Documents: 8
Expected timeline: X days
2. Pollution Consent
Department: MPCB
Status: Required
Documents: 6
3. Fire NOC
Department: Fire Department
Status: Required
4. Electricity Connection
Department: MSEDCL
Status: Required
5. Incentive Scheme
Status: Eligible/Potentially eligible

That **customized approval checklist** is the heart of the problem.

The complete system you should build

Module 1 — Entrepreneur Onboarding

Create a simple questionnaire.

Step 1

What are you setting up?

- ☐ Manufacturing
- ☐ IT/ITES
- ☐ Food Processing
- ☐ Pharmaceutical
- ☐ Textile
- ☐ Automobile
- ☐ Chemical
- ☐ Other

Step 2

Location

District:

Taluka:

Industrial Area:

Step 3

Business Details

Investment:

Land Area:

Employees:

Production Capacity:

New / Expansion:

Step 4

Environmental Details

Pollution Category:

Water Usage:

Waste Generated:

Hazardous Materials:

This information becomes the input to your **Approval Recommendation Engine**

Module 2 — Intelligent Approval Recommendation Engine

This is probably your **most important technical module**.

The system should determine:

"Which approvals does this particular business need?"

You can implement this initially using a **rule engine**, and optionally add an LLM/RAG layer.

For example:

```
IF
industry = manufacturing
AND employees > 10

THEN
Factory Licence = Required
```

Another:

```
IF
industry = chemical
AND hazardous_material = YES

THEN
Environmental Approval = Required
Hazardous Waste Approval = Required
```

Another:

```
IF
investment > X
AND location = specific zone

THEN
Additional approval = Required
```

So don't make the mistake of thinking:

"AI means ChatGPT everywhere."

A **deterministic rule engine + government knowledge base + AI assistant** would be much better.

Module 3 — Approval Dependency Graph

This is where your project can become much more impressive.

Some approvals may depend on other approvals.

For example:

But some things can happen simultaneously:

Your system should identify:

Sequential approvals

A → B → C

and

Parallel approvals

A → B

- C
- D

This directly addresses the PS's requirement to:

"coordinate parallel departmental workflows"

And it gives you a strong optimization angle:

Instead of waiting for every approval one after another, identify which approvals can be processed simultaneously.

Module 4 — Document Intelligence

This is another excellent place to use AI.

Suppose the entrepreneur uploads:

PAN.pdf

Aadhaar.pdf

Land_Document.pdf

Project_Report.pdf

Building_Plan.pdf

Your system checks:

Document checklist

Document	Required	Uploaded	Valid
PAN	Yes	✓	✓
Land document	Yes	✓	✓
Project report	Yes	✓	✓
Building plan	Yes	✓	✗

Then tell the user:

Building Plan requires correction.

You can use OCR/document AI to extract:

- Name
- Address

- Survey number
- Company name
- Dates
- Registration number
- etc.

Then compare extracted information with the application.

Example:

Application:

Company Name = ABC Industries Pvt Ltd

PAN:

Company Name = ABC Industries Pvt Ltd

Land document:

Owner = XYZ

⚠ Possible mismatch detected.

That is much more useful than simply storing PDFs.

Module 5 — Application Tracking Dashboard

The entrepreneur should have one dashboard.

Something like:

INDUSTRIAL APPROVAL DASHBOARD	

Project: ABC Food Processing Pvt Ltd	
Location: Pune	
Overall Progress	
	72%
Approvals	

✓ Business Registration	APPROVED
✓ Land Permission	APPROVED

Pollution Approval

UNDER REVIEW

Fire NOC

INSPECTION

Factory Licence

DOCUMENT ISSUE

Electricity Connection

NOT STARTED

Next Action:

Upload revised Factory Layout

Deadline:

27 August 2026

This directly addresses:

"single dashboard for applications, approvals, renewals and incentives."

Module 6 — Compliance & Renewal Management

This is **not only about getting approval**.

After getting approval, businesses have to maintain compliance.

For example:

Factory Licence

Expires: 20 Dec 2026

Pollution Consent

Expires: 15 Jan 2027

Fire NOC

Expires: 10 Feb 2027

Your system should automatically generate:

Reminder

Factory Licence expires in 30 days.

Action:
Start renewal process

You could have:

30 days before → Reminder
15 days before → Warning
7 days before → Urgent
Expired → Escalation

This addresses the **compliance monitoring** portion of the PS.

Module 7 — Government Department Dashboard

This is important.

Don't build only the entrepreneur side.

The government department should have its own dashboard.

For example:

DEPARTMENT DASHBOARD

Applications Received: 1,250

Pending: 310

Under Review: 220

Approved: 650

Rejected: 70

Average Processing Time:

Pollution → 12 days

Fire NOC → 8 days

Factory → 15 days

Electricity → 5 days

Then:

Bottleneck Detection

Your system can say:

Pollution Department is currently the largest bottleneck.

or

42 applications have exceeded their expected processing time.

This addresses the PS's:

"analytics for identifying delays."
